EXAMINATION DESCRIPTION:

PERFORMED ON: 2025-08-26 CR No:

Report:-

CECT CHEST

History: c/o Wilms tumor, metastatic, lung relapse, standard risk, 6 weeks of chemotherapy completed

Protocol: CT scan of the chest was performed in spiral mode after IV contrast administration.

Findings:

There is e/o a well-defined heterogeneously enhancing posterior mediastinal mass, ms ~1.4x0.7x1.6 cm in the right paravertebral region (D9 and D10 level). A tiny calcified focus is seen adjacent to it. No obvious extension into neural foramina seen.

Both the lungs are normal.

Tracheobronchial tree is normal.

No significant mediastinal adenopathy is noted.

Heart and mediastinal vascular structures are normal.

No pleural or pericardial effusion.

Bones are normal.

Scanned sections through upper abdomen are unremarkable.

Comparison: Compared to previous scan dated 21/07/2025, there is near complete resolution of the right sided pleural masses with a residual small posterior mediastinal mass in right paravertebral region as described.

IMPRESSION:

K/C/O metastatic Wilm's tumor with well-defined posterior mediastinal mass in the right paravertebral region as described.

		Receiving Date/Time	: 02-12-2024 /09:22:58

HISTOPATHOLOGY REPORT

MICROSCOPIC EXAMINATION:

Received two paraffin embedded tissue blocks and two HE stained slides for review as "left radical nephrectomy" (S/41311/2024 dated 5/10/2024).

Sections examined show stroma predominant tumor. An occasional focus of interspersed primitive tubules and blastema noted. The tumor cells are immunopositive for PAX-8 and focally positive for WT-1 while they are negative for BCOR, SATB2, CyclinD1, Bel6, SMA (smooth muscle actin), desmin and CD34.

The break apart FISH for *NTRK3* did not show any rearrangement. The FISH for *BCOR::CCNB3* and *ETV6::NTRK3* fusion are negative.

Based on the above histomorphological, immunological and cytogenetic features, the possibility of stroma predominant nephroblastoma is suggested.

Impression: Triphasic Wilms tumor, favourable histology.

Note: Final staging is not possible due to the limited number of blocks provided.

DIAGNOSIS:

S2457108A	Block for review	Left radical nephrectomy	• Nephroblastoma NOS 8960/3
S2457108B	Slide for review	Left radical nephrectomy	• Nephroblastoma NOS 8960/3
